DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

Group I, claim(s) 16-29, drawn to a catalytic reactor.

Group II, claim 30, drawn to methods for carrying out catalytic tests, infrared thermography analysis and “at least one further analysis”, the methods employing a reactor having a structure, as specified in claim 16.

The only technical feature, common for the above described inventions, is a reactor element which includes at least one gas inlet unit, a plurality of reaction chambers, and at least one restriction unit configured to have a plurality of channels arranged such that at least one reaction chamber can be in direct contact with at least one channel of the at least one restriction unit.

The feature does not contribute any novelty over the prior art (see, for example, Figure 18-J of Bergh et al. (US 6902934) showing reactor element 10 comprising at least one gas inlet unit 500; at least one restriction unit 501 configured to include a plurality of channels 550 that can be in direct contact with a plurality of reaction chambers 120. Therefore, the unity of inventions is lacking. In accordance with 37 CFR

Art Unit: 1797

1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

2. A telephone call was made to Mr. Christopher Bullard on 08/22/2009 to request an oral election to the above restriction requirement, but did not result in an election being made.
